

The formation of acid rain

How does acid rain form and travel out there in the real world?

Use what you have learned from reading the article 'Pollutants, sources and causes' to create a diagram that is easy to read and shows how acid rain is formed and comes down to the Earth.

Use the pictures, arrows and words below for your diagram.
You can use extra blank boxes and arrows if you need to.

sulphur dioxide	nitrogen oxides	nitric acid
sulphuric acid	gas and dust	wind speed
wet deposition	dry deposition	rain or snow
