The formation of acid rain

How does acid rain form and travel out there in the real world?

Use what you have learned from reading the article 'Pollutants, sources and causes' to create a diagram that is easy to read and shows how acid rain is formed and comes down to the Earth.

Use the pictures, arrows and words below for your diagram. You can use extra blank boxes and arrows if you need to.

sulphur dioxide

nitrogen oxides

nitric acid

sulphuric acid

gas and dust

wind speed

wet deposition

dry deposition

rain or snow
