

Evaluation of results

1. Consider your method. List the difficulties that your group found. Suggest improvements that could be made so other groups will not encounter the same problems.

Difficulties found	Improvement
<i>Counting all the animals that were very small, such as water fleas.</i>	<i>I used a hand lens. In the future I could estimate (sample) just one area of my tray.</i>

2. The Council is considering draining and building on this site. They would like you to present at a meeting the research that you have completed.

How confident are you in your data? Do you feel you have enough to discuss with the council? Explain your answer as if you are writing for council members.
